Assignment 04 – JAL Responsive

A client has hired you to make it's website reposive. The site must look right on mobile devices. The break point width to change from the actual desktop layout to the mobile one can be set to **1000px**. The actual site looks like this on mobile:

Rules and constrains:

1. Do NOT make any modifications to the HTML other than adding the meta viewport.

2. You should respect and maintain as much as possible from the actual look and feel.

3. Check your layout on a real Smartphone.

4. There should NOT be any horizontal scrolling.
